

VENT FOR CORRUGATED WALL

ABSTRACT OF THE DISCLOSURE

A vent for a corrugated wall is disclosed. The vent includes a sheet of material bent to form
5 two or more panels such that the vent fits within the corrugations of the corrugated wall. The
sheet of material includes one or more openings. Vents of this type are suitable for the
installation on the corrugated walls of cargo containers. Such a vent may be installed by
cutting a hole in the corrugated wall where the vent is to be installed. It is desirable to make
the hole of slightly smaller dimensions than the vent so that the vent at least partly overlaps
10 the wall. The vent is then attached to cover the hole by any suitable method.
